

Pasting text into HTML editor in Firefox

Due to certain security settings in Firefox, you may have trouble pasting text into FCKeditor when you try to right-click and select Paste. Earlier versions of Firefox may not allow you to paste using Ctrl-v either. To resolve these problems, choose one of the solutions below:

- From the **Edit** menu, select **Paste**.
- Press Ctrl-v. If this does not work, upgrade to the latest version of Firefox.
- Change your security settings so that Firefox will let you paste by right-clicking. To do this in Windows XP:
 1. Close all Firefox windows.
 2. Navigate to the directory below, where username is your username and ProfileName is either your full name or a string followed by ".default": C:\Documents and Settings\username\Application Data\Mozilla\Firefox\Profiles\ProfileName
 3. Using a text editor, create a file named user.js in that directory.

Note: Be sure your text editor **does not** add a .txt extension to the end of the filename. The file needs to have .js as the extension.
 4. In this file, enter the following:

```
user_pref("capability.policy.policynames", "allowclipboard");
user_pref("capability.policy.allowclipboard.sites", "https://www.samplesite.com");
user_pref("capability.policy.allowclipboard.Clipboard.cutcopy", "allAccess");
user_pref("capability.policy.allowclipboard.Clipboard.paste", "allAccess");
```

Replace https://www.samplesite.com with the name of the site for which you wish to allow pasting. Do **not** use a trailing / (slash).
 5. Restart Firefox.
